

## Values led

- We immerse the children in hands on learning, enabling students to think creatively and develop problem solving skills. Every child will build on team-working skills, showing respect and kindness to their peers, and develop their practical and motor skills which they can go on to apply in their daily lives.

## OUR DT

## Inclusive

- All children, irrespective of ability, access varied resources, suitable for all skill levels. We create a nurturing environment where all students feel valued, respected and empowered. This enables the students to work collaboratively, developing at their own pace to reach their true potential.

## Systematic

- When teaching DT, lessons are well structured, have clear objectives and are effective. Students are taught to investigate, question, research, design, sketch and plan. Evaluation involves referring back to the design criteria, making connections between initial ideas and outcomes.

## Aspirational

- We foster a mindset of creativity, ambition and high expectations, encouraging students to strive for excellence. They set high expectations for themselves and are encouraged to reach their potential as future innovators, problem solvers and creators of future real world challenges.
