

# OUR MATHS

## Values led

- We immerse the children in developing respect and an appreciation of the many ways maths can be found on the planet in both the man-made and natural world. We believe through nurturing a love of learning in maths, pupils will develop vital skills used in every aspect of their daily life.

## Inclusive

- All children irrespective of attainment, have access to high-quality maths teaching. Teachers make use of a range of resources to provide opportunities for all children to progress; through: quality first teaching, interventions, use of concrete resources and the delivery of inclusive lessons and mastery tasks.

## Systematic

- Maths is carefully planned and sequenced across the school. Each year group builds upon skills previously taught and each year, are facilitated to develop new ones. Lessons and topics are carefully thought out and sequenced in order for pupils to build strong connections within and across their learning.

## Aspirational

- Maths is used to develop deeper awareness of how the world works. Children are challenged to discover different ways of reaching a mathematical solution. In doing so, we strengthen their curiosity, invite them to question the process used, gain confidence in solving problems and develop a love of learning.
