

OUR SCIENCE

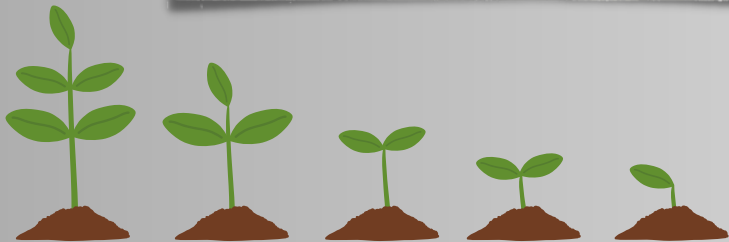

Values led

We provide high quality science enabling children to recognise the importance of science in daily life. High quality lessons result in the children developing a sense of excitement, curiosity and an appreciation for the rich diversity of life across the planet, including here at Stanburn.

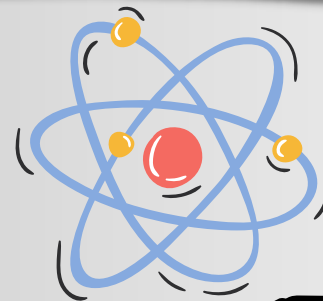

Inclusive

All children access a high-quality science education where we embed working scientifically skills and enquiry types through exploratory learning. Pupils collaborate through researching, investigating and evaluating experiences in order to grow and achieve their potential.

Systematic

The science curriculum is carefully planned and sequenced. We provide regular opportunities to revisit learning, building on previous knowledge, making connections between concepts and developing working scientifically skills across a range of topics.

Aspirational

At Stanburn, all our children take part in meaningful, memorable learning experiences that will last a lifetime. We want our children to appreciate how science has changed the lives of human beings across the planet and know that it is vital to the world's future prosperity.
